

Journey Map – Friction Overlay & Concept Sketches

Team 27 · Grand Prix Ticketing Redesign · Sprint 1, Week 2
Toby Davies (UX Designer) · Card T7 · 4 hours

1. What this is

The Week 1 journey map showed what the attendee does, thinks, and feels at each stage. This adds the evidence on top and sketches the shortlisted opportunity.

2. Friction overlay

Journey stage	Theme	What the attendee hits	Evidence
Hearing about the race	N/A	No friction evidenced	N/A
Deciding to go	B	Price is the first hurdle — costs tracking towards AFL Grand Final levels	ABC News, 20 Sep 2025
Choosing a ticket	C	Cannot tell what GA vs grandstand admits them to. \$120 vs \$400+	The F1 Spectator; Formula1.com
Buying the ticket	A	On-sale delayed by outage, queue over 100,000, sold out under an hour	Colitco; TicketGrandPrix
Paying	B	Demand-based pricing pushed prices above face value	Speedcafe; MotorRacing.com
Waiting for race week	N/A	No evidence gathered	N/A
Travelling to the circuit	N/A	Out of scope	N/A
Entering the venue	N/A	No evidence gathered	N/A
Race day	C	Seat may not deliver the view the buyer expected	The F1 Spectator

3. Where the pain concentrates

Friction sits almost entirely in the pre-purchase stages – deciding to go, choosing a ticket, and buying. Of those, choosing a ticket is the only one we can influence: the outage and the pricing model belong to the promoter and the ticketing platform. It is also the stage with the longest consequence because a poor choice made here is not discovered until race day.

4. Concept sketches

Three low-fidelity screens covering the shortlisted opportunity (C1 + C2, the ticket explorer). Rough by design – enough to size and react to, not to build from.

Sketch 1 – Browse ticket types

Opportunity: C1 – what this ticket actually gets you

Journey stage: Choosing a ticket

What it shows: A vertical list of ticket cards of one per type. Each card carries the name, the days it covers, the zone, and the price, so the difference between two options is visible without opening anything. A compare checkbox sits on each card. Mobile first in a single column since most buyers arrive on a phone.

Sketch 2 – Ticket detail

Opportunity: C1 – what this ticket actually gets you

Journey stage: Choosing a ticket

What it shows: One ticket in full. Which days of race week it admits you to, which zone of the circuit, what the view is like from there, and a plain list of what is included and what is not. The “what is not included” list is the part that does the work; it is information a buyer currently has to hunt for on third-party sites.

Sketch 3 – Compare side by side

Opportunity: C2 – compare side by side

Journey stage: Choosing a ticket

What it shows: Two or three tickets in columns, same rows down the side – days, zone, view, additional inclusions, price. Differences are the point, so matching values sit quietly and differences are emphasised. On mobile the columns scroll horizontally with the row labels pinned.

5. Note for the next stage

All three screens read from the same ticket data, so the data model needs the fields the sketches assume: days covered, zone, view description, an includes list, and price. Worth checking against the data structure document before Sprint 2 starts.
