

T7 & T13 Test Report – Browse & Detail

Sep 27, 2026 · @Matthew Kwong

Summary

25 of 53 scenarios have been assessed so far, and only 1 passed. 8 failed against the criteria and 16 aren't built yet, with 13 gaps logged (3 high severity). The other 28 scenarios still need to be run in a browser on the deployed site.

Scope: Story 1 (Browse ticket list) and Story 2 (Ticket detail view), from the Week 1 user stories and acceptance criteria. Story 3 (Checkout) is out of scope for T7.

Approach: Each scenario traces to one acceptance criterion or testing-checklist item. It is written as Given / When / Then and covers happy path, edge cases, empty states, responsive layouts, interactions and accessibility. The full scenario list is in the T7 spreadsheet (Test Scenarios tab).

How it was tested: code review of branch feature/browseTicketListAndDetails at commit 393d27e, on 27 Sep 2026. Details are in the Test execution section.

Results

Update these counts from the spreadsheet's Summary tab once testing is done.

Screen	Scenarios	Pass	Fail	Blocked	Not built	Not tested
Browse (Story 1)	25	1	5	0	8	11
Detail (Story 2)	28	0	3	0	8	17
Total	53	1	8	0	16	28

Overall status: Not ready for sign-off. Both screens load and show tickets, but several acceptance criteria aren't built yet. The biggest missing piece is stock and availability, which blocks 6 scenarios on its own.

Key findings:

- **G-04 (High):** no stock or availability data, so sold-out, low-stock and sold-out-while-viewing states can't happen (6 scenarios).
- **G-11 (High):** there's no cart. "Add to selection" puts the ticket in an on-page panel, and a second click removes it.
- **G-10 (High):** Detail shows the zone name only, with no seat description or zone map.
- **G-09 (Medium):** Detail shows day names ("Thu, Fri, Sat, Sun") instead of actual dates.
- **G-02 (Medium):** tickets are sorted A to Z by name, not by recommended order or price.

Test execution (T13)

The first round of testing was a code review of the feature branch, not a run on the deployed site. Results are recorded in the T7 spreadsheet's Test Scenarios tab. The 28 scenarios marked Not tested need a browser run on the deployed URL to meet T13's first checklist item.

Item	Details
Method (round 1)	Code review
Branch and commit	feature/browseTicketListAndDetails @ 393d27e
Tester	Kar Wei Kwong (BA)
Date	27 Sep 2026
Test data	6 seeded ticket types; no stock, restriction or zone-map data exists
Deployed URL (round 2)	[paste link]
Browsers and devices (round 2)	[e.g. Chrome on macOS 1440px; Safari on iPhone 390px]

Still to run in a browser (28):

- **Visual and design checks** (need the Grand Prix style guide): B-05, B-06, B-07, D-09, D-15
- **Responsive layouts** (desktop, tablet, 375px mobile): B-08, B-09, B-10, D-16, D-17, D-18
- **Built, but behaviour needs confirming:** B-03, B-13, B-22, B-23, D-01, D-02, D-12, D-14, D-26
- **Need test data the seed data doesn't have:** D-19 (ticket with no view description), D-21 (12 includes), D-25 (minimal ticket)
- **Content and accessibility:** D-06, D-07, D-08, B-24, D-27

Gap log

Log every scenario that fails or isn't built, so a developer can reproduce and fix it without asking you. Put the Gap ID back on the scenario row in the spreadsheet.

A good gap entry has: a clear title, the scenario ID it came from, exact steps to reproduce, expected vs actual result, a screenshot, and the device or browser used.

Severity guide:

- **Critical:** blocks the user from continuing, e.g. can't open a ticket or add it to the cart.
- **High:** breaks an acceptance criterion in a way users will notice, e.g. a sold-out ticket can still be bought.
- **Medium:** partly meets the criterion or has a workaround, e.g. the low-stock label shows the wrong number.
- **Low:** cosmetic, e.g. spacing or font weight is off from the style guide.

13 gaps were logged from the code review of feature/browseTicketListAndDetails @ 393d27e on 27 Sep 2026: 3 High, 6 Medium and 4 Low. Add screenshots and the browser or device when each gap is confirmed on the deployed site.

Gap ID	Title	Scenario s	Steps to reproduce	Expected	Actual	Severity	Status
G-01	Card missing tier badge and view quality indicator	B-02	1. Open /tickets. 2. Look at any ticket card.	Tier badge/label, price, zone, view quality indicator and days covered	No tier badge or view quality indicator; TicketType has no fields for them	Medium	Open
G-02	Tickets sorted alphabetically, not by recommended order	B-04	1. Open /tickets. 2. Compare card order with prices.	Recommended order, with price ascending as tie-breaker	Sorted A to Z by name (useTicketTypes.ts: 36)	Medium	Open

Gap ID	Title	Scenario s	Steps to reproduce	Expected	Actual	Severity	Status
G-03	No card hover state and no active state on buttons	B-11, B-12	1. Open /tickets on desktop. 2. Hover a card. 3. Click and hold a button.	Card hover state; active state on click	Only buttons have hover; no active styles	Low	Open
G-04	Stock and availability not built	B-14 to B-17, D-23, D-24	1. Check TicketType and seed data. 2. Try to set a tier to 0 or 5 left.	Sold-out cards disabled; "Only X left"; sold-out banner on Detail	No stock field, so none of these states can happen	High	Open
G-05	Price ranges not supported	B-18	1. Check TicketType.priceAud.	Range shown, e.g. "\$450-\$550"	One price per ticket type only	Medium	Open
G-06	Empty state wording differs, no waitlist link	B-19, B-20	1. Empty the ticketType collection. 2. Open /tickets.	"All tickets are currently sold out. Check back later" with waitlist link	"No tickets available / Please check back soon..." with no link	Low	Open
G-07	Spinner instead of skeleton loaders	B-21	1. Throttle to Slow 3G. 2. Open /tickets.	Skeleton placeholder per card	One spinner with "Loading tickets..."	Low	Open
G-08	Buttons below 44px touch size	B-25	1. Open /tickets at 375px. 2. Inspect button height.	Buttons at least 44px	About 38px tall; close (X) about 38px square	Medium	Open
G-09	Day names shown instead of actual dates	D-03	1. Open /tickets. 2. View details on a 4-day ticket.	Actual dates, e.g. Fri 13 - Sun 15 March	"Thu, Fri, Sat, Sun"	Medium	Open

Gap ID	Title	Scenarios	Steps to reproduce	Expected	Actual	Severity	Status
G-10	No seat description or zone map	D-04, D-05, D-20	1. Open any ticket's details.	Seat description; zone map with alt text, or "Zone map not available"	Zone name only; no fields for description or map	High	Open
G-11	No cart: "Add to selection" instead of Add to cart	D-10, D-11	1. Open a ticket's details. 2. Click the green button twice.	Cart count 0 to 1 with toast; second click raises quantity	Adds to an on-page panel; second click removes it	High	Open
G-12	Detail has no URL; back and refresh not handled	D-13, D-28	1. Dashboard, then Browse tickets. 2. Open details. 3. Press back or refresh.	Back returns to Browse; refresh or direct link loads the ticket	Back goes to Dashboard; refresh closes the modal; no direct link	Low	Open
G-13	No restriction warning	D-22	1. Check TicketType for a restrictions field.	Restriction (e.g. 18+) in a prominent callout	No field, so nothing shown	Medium	Open

Accessibility check

Both screens are checked against the main WCAG 2.1 AA requirements. Log every Fail or Partial in the gap log above, and put its Gap ID in the Notes column here.

Automated scan scores (Lighthouse Accessibility score, or axe/WAVE issue count):

Screen	Tool	Score or issues	Screenshot
Browse	Lighthouse	[not run yet]	[link]

Screen	Tool	Score or issues	Screenshot
Detail	Lighthouse	[not run yet]	[link]

Manual checks:

#	Check	How to test	Screen	Result	Notes / Gap ID
A1	Keyboard access	Tab through the page. Every button and link is reachable, in a sensible order, and works with Enter.	Both	Pass	All the button leads to necessary pages within the website. Without any problem.
A2	Visible focus	A clear outline shows on whatever is focused.	Both	Pass	Certain necessary button is highlighted when I hover over the button to convey they're selecting that button.
A3	Text contrast	Text meets 4.5:1 contrast, including greyed-out sold-out cards.	Both	Fail	N/A
A4	Status not by colour only	"Sold out" and "Only X left" are shown as text, not just colour.	Browse	Fail	N/A
A5	Screen reader labels	With VoiceOver (Cmd+F5), buttons, prices and stock labels are read out clearly.	Both	Pass	Even though the information is correct on certain aspect however it still reads inline code. Such as "You're currently on header level 2"
A6	Disabled button announced	VoiceOver says the sold-out button is unavailable.	Browse	Pass	It correctly says the button is sold-out

#	Check	How to test	Screen	Result	Notes / Gap ID
A7	Image alt text	The zone map has alt text describing where the zone is.	Detail	Fail	No zone map exists (G-10).
A8	Messages announced	Add to cart confirmation, sold-out banner and restriction warnings are read out.	Detail	Fail	N/A
A9	Zoom to 200%	At 200% zoom, nothing overlaps or gets cut off.	Both	Pass	With 200% zoom it doesn't not create any overlap or irregular sizing for the buttons and texts. With the left tool bar tucking into a menu burger.
A10	Touch target size	On mobile, buttons are at least 44px by 44px.	Both	Pass	The button's size is at a appropriate size

Accessibility summary: 2 of 10 checks fail from the code review: buttons are below 44px (G-08), and the zone map that needs alt text doesn't exist (G-10). The detail modal's foundations look sound, with a native dialog, focus moved on open and a labelled title. A Lighthouse scan, keyboard pass and VoiceOver pass on the deployed site are still needed.

Open questions on the acceptance criteria

6 of the 10 questions now have answers from the developers. Q-01 is still open, and Q-02 to Q-04 were only marked "not implemented", so their rules still need deciding before those features are built.

ID	Question	Affects	Answer
Q-01	Mobile breakpoint is under 768px in Story 1 but under 786px in Story 2. Which is correct?	B-09, D-17	Not answered yet

ID	Question	Affects	Answer
Q-02	Low stock is "under 20". Does exactly 20 show the label, and is the wording "Only X left"?	B-16, B-17	Not decided: feature not implemented (Blake)
Q-03	Should type and price be sticky while scrolling, or just a fixed value?	D-02	Not decided: not implemented (Blake)
Q-04	Desktop should show all sections without scrolling, but 10+ item lists are allowed. Which wins?	D-16, D-21	Not decided: not implemented (Blake)
Q-05	Does the card button open a pop-up on Browse, or go to the Detail screen?	B-03, D-01	Pop-up (modal) on Browse, as implemented (Blake)
Q-06	If a ticket sells out while viewing, does the page update live or only on Add to cart?	D-23	Re-check on Add to cart; if sold out, the add fails and the page shows Sold out (Julias)
Q-07	What happens if Add to cart is clicked twice?	D-11	Quantity of the existing cart item goes up, no duplicate line, subject to any purchase limit (Julias)
Q-08	What is the "recommended order" for tickets?	B-04	Set by the product/design team; price ascending as tie-breaker (Julias)
Q-09	Is the empty-state link to the FAQ or a waitlist?	B-20	Waitlist / availability notification (Julias)
Q-10	What should happen with browser back, refresh or a direct link to a detail page?	D-13, D-28	Back returns to the previous page or state; refresh or a valid URL loads the ticket; an invalid URL shows a not-found state (Julias)

Next steps

- ☒ Write test scenarios for both screens (T7)
- ☒ Send the open questions to the developers (T7)
- ☒ Code review of the feature branch, with 25 scenarios assessed and 13 gaps logged
- ☐ Get the deployed URL and run the 28 remaining scenarios in a browser
- ☐ Confirm the code-review gaps on the deployed site, adding screenshots and browser details
- ☐ Run Lighthouse, a keyboard pass and a VoiceOver pass for the accessibility check
- ☐ Update the results table and share the report with both developers
- ☐ Get Q-01 to Q-04 decided before stock, sticky header and long-list work starts

Developer handover (T13)

Share this report and the spreadsheet with both developers in the T13 task chat, then tick off T13 in Planner.

T13 checklist mapping:

T13 checklist item	Where it's covered
All scenarios executed on the deployed URL with results recorded	Test execution section, plus the Result column in the spreadsheet
Defects logged with repro steps, expected versus actual	Gap log
Accessibility findings included and shared with both developers	Accessibility check section, plus the message below

Message to post in the T13 task chat (edit the brackets):

Hi @Blake @Julias, here are the test results for Browse and Detail so far. I've reviewed the feature branch (393d27e) against all 53 scenarios: 1 passed, 8 failed, 16 aren't built yet, and 28 still need a browser run on the deployed site. I've logged 13 gaps (3 high, 6 medium, 4 low), including 2 accessibility issues.

Report: [link to this doc] Scenarios and results: [link to spreadsheet]

Highest priority: G-04 stock and availability, G-11 no cart, and G-10 no seat description or zone map. Can you each let me know which gaps you're taking? Also, could you send me the deployed URL so I can finish the remaining scenarios and the accessibility pass?
