Individual Team Member Reviews

Rate each person on Communication, Responsiveness, and Quality of Work using: 0 (creates blockers), 1 (adequate) & 2 (On time, clear and effective). Then add one overall comment — specific and evidence-based, referencing actual tasks or deliverables, not a general impression.

Julius Ross— Developer 2 (build and test)

Tasks owned: Mock Sprint QA

Communication	Responsiveness	Quality of Work
2	2	2

Comments: Julius took ownership of quality on the mock sprint without needing to be chased, producing the QA checklist before testing began rather than documenting after the fact. His four commits to docs/MOCKSPRINT-QA.md show testing done in stages — deployment, final results, then edge cases — which is exactly the discipline we need.

Blake Leonard - Developer 1(build and review)

Tasks owned: Code review and integration

Communication	Responsiveness	Quality of Work
2	2	2

Comments: Blake acted as the second pair of eyes before anything reached main, reviewing and merging three pull requests rather than letting work go straight through. He turned reviews around quickly enough that the branch queue never backed up

Matthew (Kar Wei) Kwong — Business Analyst

Tasks owned: Requirements definition

Communication	Responsiveness	Quality of Work
2	2	2

Comments: He also drew a firm styling-only boundary around the login work, which kept authentication logic untouched and made the change safe to review. He also helped me a lot during the final submission organizing the documents and everything.

Toby Davies — UX Designer

Tasks owned: Visual design direction

Communication	Responsiveness	Quality of Work
[Rating]	[Rating]	[Rating]

Comments: Toby set a coherent visual direction and stuck to it across every screen, so the login, sign-up and landing pages read as one product rather than three separate efforts. He was also pragmatic about scope, keeping the restyle to presentation only so the authentication behavior was never put at risk.
