Production Content Standard – Ticket Explorer

Oct 17, 2026 · @Matthew Kwong

Purpose

This standard defines what content must look like before any ticket explorer screen goes to production. Every screen (Dashboard entry, Browse, Detail and Compare, plus their error and empty states) is audited against the 16 rules below, and anything that breaks a rule is logged as a gap.

- **Rule IDs:** CS-01 to CS-16. The S3W2 spreadsheet's Content Audit tab checks each rule on each screen it applies to.
- **Language:** Australian English (colour, centre, licence).
- **Related documents:** the Sprint 2 user stories and acceptance criteria, and the S3W1 accessibility and error-handling criteria (ERR, EMP and FS IDs).
- **Assumption:** Compare shows 2 to 3 selected tickets side by side (S3W1 Q-02, still to confirm).

Ticket data content

Ticket data must be real, complete and formatted the same way on every screen, so a ticket reads identically on Browse, Detail and Compare.

ID	Rule	Passes when	Fails, for example
CS-01	Ticket names	Official Grand Prix tier name, Title Case, 40 characters or fewer, same name on every screen	"grandstand_a", "VIP Pkg (test)", different names on Browse and Detail
CS-02	Prices	Australian dollars with a $ sign, whole dollars without cents ("$450"), ranges with an en dash ("$450–$550")	"$0", "$NaN", "450", "$450.00" next to "$450"
CS-03	Dates	Real dates with day names, e.g. "Fri 13 – Sun 15 Mar 2026"	Only day names, "Thu, Fri, Sat, Sun" (G-09), or "3-day pass" alone

ID	Rule	Passes when	Fails, for example
CS-04	Zone and seat	Zone name plus a 1 to 2 sentence seat description	Zone name only (G-10), or a description that names a different zone
CS-05	View description	Plain language, 15 to 60 words, describes what you can see from the seat; if missing, shows "View description coming soon"	Jargon, copied marketing text, blank space, or seed placeholder text
CS-06	Includes and excludes	Parallel items starting with a noun, sentence case, no full stops; empty excludes shows "Not specified for this ticket"	Mixed styles ("Access to lounge." next to "food"), a hidden Excludes section
CS-07	Stock labels	Exactly "Sold out" at 0 left, and "Only X left" under 20 left	"SOLD OUT!!", "Low stock", a label shown by colour only

Interface copy

Interface text tells users what will happen in plain words, and the same action always has the same label.

ID	Rule	Passes when	Fails, for example
CS-08	Button labels	Start with a verb, sentence case, say what happens: "View details", "Add to cart", "Compare tickets", "Remove"	"Add to selection" on one screen and "Add to cart" on another; "OK", "Submit"
CS-09	Error, empty and fallback messages	Match the S3W1 wording (ERR, EMP and FS criteria) and give a next step	"Missing or insufficient permissions", a raw API error (G-14), "Error 500"
CS-10	Spelling, grammar and case	Australian English, no typos, sentence case for headings and buttons	"Color", "Recieve", "VIEW DETAILS" next to "View details"
CS-11	No placeholder or test content	No lorem ipsum, "TBD", "test", "TODO", "undefined", "null", "NaN" or "[object Object]" anywhere	Seed data saying "Description goes here", a ticket called "Test ticket 2"

Brand, images, structure and links

Every screen must look like the Grand Prix site, show working images with alt text, and link only to pages that exist.

ID	Rule	Passes when	Fails, for example
CS-12	Brand	Grand Prix palette (red, black, white) and typography, matching existing site pages	Green as the main accent colour (G-15), a different font family
CS-13	Images	No broken or stretched images; meaningful images have alt text; the zone map's alt text says where the zone is	Broken image icon, alt="image1.png", zone map with no alt (G-10)
CS-14	Page titles and headings	Each page has a unique title ("Tickets – [site name]") and one main heading	Every page titled "Vite App", two main headings, headings skipped for styling

ID	Rule	Passes when	Fails, for example
CS-15	Links	Descriptive link text, every link resolves (no 404 or blank page), and goes to the page its text promises	"Click here", a waitlist link that 404s, "Back to tickets" going to the Dashboard
CS-16	Restrictions and conditions	Age limits and other conditions (e.g. 18+) show in a visible callout on Detail and Compare	Restrictions only in fine print, or missing (G-13)

Auditing and severity

The audit is done on the deployed site, screen by screen, using the Content Audit and Link Check tabs of the S3W2 spreadsheet; every failure goes on the Gap List with a severity.

1. Open each screen at desktop (1440px) and mobile (375px) widths.
2. For each rule that applies to the screen, mark Pass or Fail and note what you saw.
3. Trigger the error, empty and fallback states (go offline in dev tools, open a ticket with missing data) and audit those too.
4. Click every link and button that navigates, and record where it actually goes.
5. Log each failure on the Gap List with a screenshot and severity, then hand the list to both developers.

Severity	Meaning	Example
Critical	Blocks the journey or shows broken or wrong information users could act on	Wrong price, a link that crashes the page, "$NaN"
High	Breaks a rule users will clearly notice, or misleads them	Raw API error, sold-out ticket still buyable, a 404 link
Medium	Inconsistent or incomplete, but users can carry on	Day names instead of dates, mixed button labels, off-brand colour
Low	Cosmetic polish	Capitalisation, a full stop in a list, minor spacing
