ID	Screen	AC reference	Type	Scenario
STORY 1 - BROWSE TICKET LIST				
B-01	Browse	S1 AC: All ticket types on one screen	Happy path	All ticket tiers shown together
B-02	Browse	S1 AC: Card details	Happy path	Each card shows the required fields
B-03	Browse	S1 AC: Card details (button)	Happy path	Card button opens more information
B-04	Browse	S1 AC: Ordering	Happy path	Tickets are in a sensible order
B-05	Browse	S1 AC: Visual hierarchy	Visual	Price and tier stand out
B-06	Browse	S1 AC: Palette & typography	Visual	Grand Prix brand is applied
B-07	Browse	S1 AC: Component patterns	Visual	Components match current design
B-08	Browse	S1 Responsive: Desktop	Responsive	Desktop shows every field
B-09	Browse	S1 Responsive: Mobile <768px	Responsive	Mobile stacks into one column
B-10	Browse	Testing checklist: Tablet	Responsive	Tablet reflows correctly
B-11	Browse	S1 Interactions: Hover	Interaction	Hover state on desktop only
B-12	Browse	S1 Interactions: Focus/active	Interaction	CTA focus and active states
B-13	Browse	S1 Interactions: No unintended navigation	Interaction	Clicking non-CTA areas does nothing unexpected
B-14	Browse	S1 Edge: Out of stock	Edge case	Sold-out tier is labelled and disabled
B-15	Browse	S1 Edge: Out of stock	Edge case	Disabled button cannot be used
B-16	Browse	S1 Edge: Limited availability	Edge case	Low stock shows urgency label
B-17	Browse	S1 Edge: Limited availability	Edge case	Low-stock boundary values

B-18	Browse	S1 Edge: Price range	Edge case	Price range for varied pricing
B-19	Browse	S1 Empty: No tickets	Empty state	All tickets sold out message
B-20	Browse	S1 Empty: No tickets	Empty state	FAQ / waitlist link works
B-21	Browse	S1 Empty: Loading	Empty state	Skeleton loaders while loading
B-22	Browse	S1 Empty: Fetch error	Empty state	Error message with retry
B-23	Browse	S1 Empty: Fetch error	Empty state	Retry recovers
B-24	Browse	Testing checklist: Accessibility	Accessibility	Contrast and screen reader
B-25	Browse	Testing checklist: Visual	Responsive	Minimum sizes on mobile
STORY 2 - TICKET DETAIL VIEW				
D-01	Detail	S2 (entry from Browse)	Happy path	Correct ticket opens
D-02	Detail	S2 AC: Type & price at top	Happy path	Type and price are prominent at the top
D-03	Detail	S2 AC: Dates	Happy path	Dates are explicit
D-04	Detail	S2 AC: Zone/Location	Happy path	Zone name and seat description
D-05	Detail	S2 AC: Zone map	Happy path	Zone map shows position
D-06	Detail	S2 AC: View description	Content	View description is clear
D-07	Detail	S2 AC: Includes	Happy path	Includes section complete
D-08	Detail	S2 AC: Excludes	Happy path	Excludes section clear
D-09	Detail	S2 AC: Primary CTA	Visual	Add to cart button stands out
D-10	Detail	S2 Interactions: Add to cart	Interaction	Add to cart updates cart
D-11	Detail	S2 Interactions: Add to cart	Edge case	Adding the same ticket twice

D-12	Detail	S2 Interactions: Back to Browse	Interaction	Back keeps scroll position
D-13	Detail	S2 Interactions: Back (browser)	Edge case	Browser/device back button
D-14	Detail	S2 Interactions: Links	Interaction	All links work
D-15	Detail	S2 AC: Design system	Visual	Grand Prix design applied
D-16	Detail	S2 Responsive: Desktop	Responsive	Desktop layout without scrolling
D-17	Detail	S2 Responsive: Mobile	Responsive	Mobile single column
D-18	Detail	S2 Responsive: Readable text	Responsive	Text readable at all sizes
D-19	Detail	S2 Edge: Missing data	Edge case	Placeholder for missing view description
D-20	Detail	S2 Edge/Empty: No zone map	Edge case	Missing zone map handled
D-21	Detail	S2 Edge: Long descriptions	Edge case	10+ includes/excludes
D-22	Detail	S2 Edge: Restrictions	Edge case	Restriction warning is prominent
D-23	Detail	S2 Edge: Sold out on detail	Edge case	Ticket sells out while viewing
D-24	Detail	S2 Edge: Sold out on detail	Edge case	Sold-out banner link
D-25	Detail	S2 Empty: Bare minimum ticket	Empty state	Minimal ticket shown honestly
D-26	Both	Testing checklist: Content	Content	Data consistent across screens
D-27	Detail	Testing checklist: Accessibility	Accessibility	Keyboard and screen reader
D-28	Detail	Not in AC	Edge case	Direct link / refresh on detail

Given	When
Several ticket tiers are available	User opens the Browse screen
Tickets have full data	User views any ticket card
Browse screen is loaded	User clicks the card's button
Several tiers with different prices	User opens Browse
Browse screen is loaded	User scans the cards
Browse screen is loaded	Compare against the Grand Prix style guide
Browse screen is loaded	Compare cards, buttons and labels with the existing site
Desktop browser (1280px+)	User opens Browse
Screen width under 768px (e.g. 375px)	User opens Browse
Tablet width (~768-1024px)	User opens Browse
Desktop browser	User hovers over a ticket card
Desktop browser	User tabs to a CTA with the keyboard, then clicks it
Browse screen is loaded	User clicks badges, labels, prices and empty card space
One tier has 0 tickets left	User views that card
One tier is sold out	User clicks or taps the disabled button (and tries keyboard Enter)
A tier has 5 tickets left	User views that card
Test with 20, 19 and 1 tickets left	User views the card each time

One ticket type has prices \$450 and \$550	User views that card
No tickets are available at all	User opens Browse
Empty state is showing	User clicks the FAQ or waitlist link
Slow network (throttle in dev tools)	User opens Browse
Ticket data fails to load (offline or API error)	User opens Browse
Error state is showing and connection is restored	User clicks Retry
Browse screen with a sold-out and a low-stock card	Check contrast (WCAG AA) and use a screen reader
Mobile width	Inspect text and buttons
Browse screen is loaded	User opens detail for the Grandstand ticket
Detail page is open	User views and scrolls the page
Detail page for a multi-day ticket	User reads the date section
Detail page is open	User reads the zone section
Ticket has a zone map	User views the map
Detail page is open	User reads the view description
Ticket has inclusions	User reads Includes
Ticket has exclusions	User reads Excludes
Detail page is open	User views the CTA
Cart is empty	User clicks "Add to cart"
Ticket already in cart	User clicks "Add to cart" again

User scrolled halfway down Browse, then opened a detail page	User clicks "Back to Browse"
Same as D-12	User uses the browser or phone back button instead
Detail page is open	User clicks every link on the page
Detail page is open	Compare against the style guide
Desktop browser (1280px+)	User opens a detail page
Screen width under the mobile breakpoint (see Q-01)	User opens a detail page
Test at mobile, tablet and desktop widths	Read every section
Ticket has no view description	User opens detail
Ticket has no zone map	User opens detail
Ticket has 12 Includes items	User views the list on mobile and desktop
Ticket has a restriction (e.g. 18+ only)	User opens detail
User is on a detail page and stock drops to 0	Page updates / user tries to add to cart
Sold-out banner is showing	User clicks the link in the banner
Ticket includes only seating type and has no exclusions	User opens detail
Pick 3 tickets	Compare price, days and zone on Browse vs Detail
Detail page with a restriction warning	Navigate by keyboard only and with a screen reader
User has the detail page URL	User refreshes the page or opens the link directly

Then (expected result)	Actual result	Result
Every ticket tier is shown on one screen with no need to click into each	It showed without any problem	Pass
Card shows tier badge/label, price, zone name, view quality indicator and days covered	Card shows name, price, zone, days covered and view description. No tier badge/label and no view quality indicator.	Fail
Enlarged ticket info opens, adding extra detail such as seat location relative to other zones		Not tested
Tickets are ordered by price (or the agreed recommended order) consistently every load	Tickets are sorted alphabetically by name, not by price (useTicketTypes.ts:36)	Fail
Price and tier are the most prominent elements; the service provided is also visible		Not tested
Colours and fonts match the existing Grand Prix palette and typography		Not tested
Component patterns are consistent with the current design		Not tested
All data fields on every card are visible, nothing cut off		Not tested
Cards stack in a single column, no text truncation, no horizontal scroll, still easy to scan		Not tested
Layout reflows cleanly (e.g. 2 columns to 1) with no overlap		Not tested
Card shows a hover state; the same effect does not stick on mobile after tapping	No hover state on the card itself; only the buttons change on hover	Not built
A visible focus state appears on tab, and an active state appears on click	Buttons have a visible focus outline (focus-visible) but no active/pressed style	Fail
No unexpected page change; only the intended CTA navigates		Not tested
Card shows "Sold out", button is disabled, card is muted/greyed but still readable	No stock/availability field in the data model; sold-out state not built	Not built
Nothing happens; no navigation, no error	No stock/availability field in the data model; sold-out state not built	Not built
Card shows "Only 5 left"; button stays enabled	No stock/availability field in the data model; low-stock label not built	Not built
20 shows no label; 19 shows "Only 19 left"; 1 shows "Only 1 left" (confirm wording, see Q-02)	No stock/availability field in the data model; low-stock label not built	Not built

Card shows the range, e.g. "Grandstand \$450-\$550"	Each ticket has a single price (priceAud); price ranges are not supported	Not built
Centred message "All tickets are currently sold out. Check back later"; no ticket cards shown	Empty state exists but reads "No tickets available / Please check back soon for available ticket types."	Fail
Link opens the correct FAQ or waitlist page	Empty state has no FAQ or waitlist link	Not built
Skeleton placeholder shown for each card; animation is subtle and loops smoothly; replaced by real cards when loaded	A spinner with "Loading tickets..." is shown instead of skeleton cards	Not built
Friendly error message with a Retry button is shown; no broken cards		Not tested
Tickets load normally		Not tested
Text meets AA contrast (including muted cards); "Sold out"/"Only X left" and CTA states are announced		Not tested
No text below 12px; buttons at least 44px tall/wide	Buttons are about 38px tall (text-sm + py-2), below the 44px minimum. Smallest text is 12px (AUD label).	Fail
Detail page shows Grandstand data, matching the card that was clicked		Not tested
Ticket type and price sit at the top, are prominent and don't change (see Q-03)		Not tested
Actual dates are listed (e.g. Fri 13 - Sun 15 March), not just "3-day pass"	Only day abbreviations are shown (e.g. "Thu, Fri, Sat, Sun"), not actual dates	Fail
Zone name and a description of the seat are shown	Zone name is shown; there is no seat description	Fail
Map/diagram highlights where the zone sits in the venue; scales properly and has alt text	No zone map	Not built
Description explains the view in plain, jargon-free language		Not tested
Shows seating type, facility access and any perks/complimentary items		Not tested
Clearly states what is NOT provided, e.g. "Food/beverage sold separately"		Not tested
"Add to cart"/"Purchase" button is large and high contrast		Not tested
Cart count goes from 0 to 1; confirmation toast or modal appears	No cart. The button adds the ticket to an on-page "Your selection" panel; no cart count or toast	Not built
Behaviour matches the agreed rule (count goes to 2, or a message shows) - see Q-07	No cart. Clicking again toggles the ticket back out of the selection	Not built

Browse shows again at the same scroll position		Not tested
Returns to Browse at the same position (not in AC - see Q-10)	Modal is not in browser history, so browser back leaves the tickets page entirely	Fail
Each link goes to the correct place; none are broken		Not tested
Colours, typography and components match the Grand Prix system		Not tested
2-column or full-width layout; all sections visible without scrolling (see Q-04)		Not tested
Single column; sections stack vertically; all content reachable; no horizontal scroll		Not tested
Text is readable at every size; nothing below 12px		Not tested
Shows "View description coming soon" instead of a blank or error		Not tested
Shows "Zone map not available"; view description is detailed enough on its own	No zone map, so no "Zone map not available" message either	Not built
All items remain accessible (smaller text or secondary section); no horizontal overflow on mobile		Not tested
Warning shown in an alert/callout box, clearly visible without hunting for it	No restrictions field in the data model; no warning callout	Not built
Top banner: "The ticket is no longer available. View other options"; CTA disabled and relabelled "Sold out" (see Q-06)	No stock/availability field in the data model	Not built
Returns to the Browse screen	No sold-out banner	Not built
Includes lists only the seating type with no filler; Excludes section is still shown (empty), not hidden		Not tested
All values match exactly on both screens		Not tested
Focus is always visible; CTAs, toast, warnings and sold-out banner are announced; map has alt text		Not tested
Page loads the same ticket (or a sensible fallback) - see Q-10	Detail has no URL of its own; refreshing closes the modal and shows Browse, and it cannot be linked to directly	Not built

Gap ID	Tester	Date tested	Notes
		27/09/2026	All 6 seeded ticket types render as cards on one screen
G-01		27/09/2026	Fields do not exist in the TicketType data model
		27/09/2026	Built: "View details" opens a modal (Q-05). Seat location relative to other zones is not shown (see G-10)
G-02		27/09/2026	Needs Q-08 answered, but alphabetical is neither price nor a recommended order
		27/09/2026	Price is green and larger than body text; no tier badge exists (G-01)
		27/09/2026	Needs comparison against the Grand Prix style guide in a browser
		27/09/2026	Needs comparison against the existing site in a browser
		27/09/2026	Code uses 1 column below 768px (md:grid-cols-2) - check at 375px
G-03		27/09/2026	
G-03		27/09/2026	Focus part looks built - confirm by tabbing in a browser
		27/09/2026	Cards have no click handler, so only buttons should react - confirm in browser
G-04		27/09/2026	
G-04		27/09/2026	
G-04		27/09/2026	
G-04		27/09/2026	Also blocked by Q-02

G-05		27/09/2026	
G-06		27/09/2026	Wording differs from AC; shows when zero ticket types exist (no sold-out concept yet)
G-06		27/09/2026	Also needs Q-09 answered
G-07		27/09/2026	
		27/09/2026	Built: error message + Retry button. Test by going offline in dev tools
		27/09/2026	Built: Retry re-fetches the catalogue
		27/09/2026	Sold-out/low-stock parts cannot be tested until G-04 is built
G-08		27/09/2026	Measure in dev tools to confirm
		27/09/2026	Detail opens as a modal over Browse, not a separate screen (Q-05)
		27/09/2026	Name and price are in the modal header; see Q-03 for sticky behaviour
G-09		27/09/2026	
G-10		27/09/2026	
G-10		27/09/2026	
		27/09/2026	Seed data descriptions are placeholders pending real client data
		27/09/2026	Built as "What's included" list
		27/09/2026	Built as "What's not included" list
		27/09/2026	Button is labelled "Add to selection", same size as other buttons
G-11		27/09/2026	
G-11		27/09/2026	Also needs Q-07 answered

		27/09/2026	Detail is a modal, so closing it should leave Browse at the same scroll position. There is no "Back to Browse" button, only a close (X) button
G-12		27/09/2026	Not in AC - see Q-10
		27/09/2026	The modal currently contains no links, only buttons
		27/09/2026	Modal is capped at 90% of screen height and scrolls inside
		27/09/2026	Includes/Excludes stack below 640px, not 768px (see Q-01)
		27/09/2026	Built: shows "View description not provided." Needs a ticket without a description to test
G-10		27/09/2026	
		27/09/2026	Needs a ticket with 12 includes; seed data has at most 3-4
G-13		27/09/2026	
G-04		27/09/2026	Also needs Q-06 answered
G-04		27/09/2026	
		27/09/2026	Built: empty Excludes shows "Not specified for this ticket." (section kept, not hidden)
		27/09/2026	Browse and Detail use the same components, so values should match
		27/09/2026	Modal is a native dialog, moves focus to the close button and has a labelled title. No zone map or warnings exist yet
G-12		27/09/2026	Not in AC - see Q-10

[illegible]

Q ID	Story	Question / ambiguity
Q-01	S1	Low stock is "< 20". Does exactly 20 show the label? Exact wording "Only X left"?
Q-02	S2	Type & price "unchanging" - does this mean sticky while scrolling, or just that the value doesn't change?
Q-03	S2	Desktop says all sections visible without scrolling, but long lists (10+ items) are allowed. Which wins?
Q-04	S1	Card button "enlarges" ticket info - is this a modal on Browse, or navigation to the Detail screen?
Q-05	S2	Sold out while viewing - does the page update live, or only when the user clicks Add to cart?
Q-06	S2	Detail has no quantity selector, but checkout shows quantity. What happens when Add to cart is clicked twice?
Q-07	S1	"Recommended order" - who defines it, and is it price ascending or descending by default?
Q-08	S1	Empty state link: FAQ or waitlist? Where do they point?
Q-9	S2	Browser back button, page refresh and direct links to a detail page aren't covered. What's expected?

Why it matters for testing	Affects
Boundary test B-17 needs a fixed rule	B-16, B-17
Changes whether we test scroll behaviour	D-02
The two ACs can't both pass for long tickets	D-16, D-21
Defines expected result for B-03 and links Story 1 to Story 2	B-03, D-01
Decides how to trigger and test D-23	D-23
D-11 has no defined expected result	D-11
B-04 needs a known correct order	B-04
B-20 needs target URLs	B-20
Common real-world paths; currently untestable	D-13, D-28

Answer	Answered by
Not implemented	Blake Dev
Not implemented	Blake Dev
Not implemented	Blake Dev
Implemnted	Blake Dev
Availability should be re-checked when the user clicks Add to cart. If the ticket has sold out since the page loaded, the add should fail and the page should update to show Sold out.	Julias Dev
Clicking Add to cart twice should increase the quantity of the existing cart item rather than create a duplicate line item, subject to any purchase limit	Julias Dev
“Recommended order” should be defined by the product/design team. If two tickets have the same recommendation priority, use price ascending as the default tie-breaker.	Julias Dev
The empty-state link should point to a waitlist/availability notification option rather than a general FAQ, since that is more directly useful when no tickets are available.	Julias Dev
Browser back should return the user to their previous page/state where possible. Refreshing or directly opening a valid detail URL should load that ticket normally; an invalid/non-existent ticket URL should show a clear not-found state rather than break the page.	Julias Dev
